Task 2.2C Particle - Create a tutorial video

Question 1
https://youtu.be/YgYnYSIoU-Q

Question 2

I have used a different approach to develop code in this task. I switched to using **particle cli** to upload code to particle devices. This task has allowed me to learn a lot more that using online particle console to upload code to my Particle Argon. I learnt how to use the 'particle-cli' to manipulate particle devices which allows a superior control over internet.

 I was able to learn below usages of particle cli,

- Add/remove devices
- Flash code to particle devices
- Different modes in particle devices (DFU, Wifi connecting, Wifi connected, Listening)
- Use serial communication with the devices
- Use more complex project structures with the particle devices
